Subject Index of Volume 69

Acoustic levitation reactor
development of, 125
Agglomeration models
for process design and control, 69

Batch grinding kinetics, 133
Biomass conversion
control of downdraft gasifier for, with fuzzy controller, 53
Bubble velocity
in fluidized beds: effect of non-vertical bubble rise on its measurement using submersible probes and its relationship with bubble size, 239

Capacitance imaging
observations of fluidized bed coalescence using, 255
Cellulose polymers
compaction behaviour of, 177
CFB reactors
simple model for turbulent gas mixing in, 101
Coal
fine; saltation velocities in high pressure conveying of, 157
Coal/water slurries
two-phase non-Newtonian; hydrodynamic modelling and analysis of, 285
Comminution circuits
industrial; simulation of locked-cycle grinding of multicomponent feeds and its implications for stability and control of, 77
Compaction behaviour
of cellulose polymers, 177
Compacts
ordered monodisperse silica: sintering studies on; effect of consolidation, 185
powder; influence of loading rate and packing fraction on visco-elastic behaviour of, 231
Control
agglomeration models for process design and, 69
of downdraft gasifier for biomass conversion with fuzzy controller, 53
of grinding circuits using phenomenological models, 47
of industrial crystallizers, 11
model-based, of mineral processing operations, 21
and modelling of crystallizers, 3
self-tuning adaptive; simulation study of, for rougher flotation, 33
simulation of locked-cycle grinding of multicomponent feeds and its implications for stability and, of industrial comminution circuits, 77
Crystallizers
industrial; control of, 11
modelling and control of, 3

Downdraft gasifier
control of, for biomass conversion with fuzzy controller, 53

Flotation
simulation study of self-tuning adaptive control for rougher flotation, 33
Flow characteristics
in rectangular spout-fluid bed, 205
Fluidization
selective magnetic; separation of minerals by, 279
Fluidization velocity
re-examination of minimum fluidization velocity correlations applied to Group B sands and coked sands, 147
Fluidized bed(s)
bubble velocity in: effect of non-vertical bubble rise on its measurement using submersible probes and its relationship with bubble size, 239
coalescence; observations of, using capacitance imaging, 255
drying of granular food materials, 213
improved thermal conductivity detector technique for He measurements in, 249
measurements of gas–particle flows and elutriation of 18 inch i.d. cold vortexing fluidized-bed combustion model, 139
slugging behaviour of, of large particles, 171
wall-to-bed heat transfer in gas–solid fluidized beds: prediction of heat transfer regimes, 223
Fluidizing characteristics
cold model studies on, of taconite concentrates, 295
Food materials
granular; fluidized bed drying of, 213

Gas–particle flows
measurements of, and elutriation of 18 inch i.d. cold vortexing fluidized-bed combustion model, 139
Gas–solid fluidized beds
wall-to-bed heat transfer in: prediction of heat transfer regimes, 223
Granular food materials
fluidized bed drying of, 213
Granular material flow
models of, under dynamic conditions, 107
Grinding
batch, kinetics, 133
circuits; control of, using phenomenological models, 47
locked-cycle; simulation of, of multicomponent feeds and its implications for stability and control of industrial comminution circuits, 77
performance; effects of mill feed size and rod charges on, 119

Heat transfer
wall-to-bed, in gas–solid fluidized beds: prediction of heat transfer regimes, 223
Helium measurements
improved thermal conductivity detector technique for, in fluidized bed, 249
High pressure conveying
saltation velocities in, of fine coal, 157
Hydrodynamic modelling
and analysis of two-phase non-Newtonian coal/water slurries, 285

Loading rate
and packing fraction; influence of, on visco-elastic behaviour of powder compacts, 231

Magnetic fluidization
selective; separation of minerals by, 279
Mill feed size
and rod charges; effects of, on grinding performance, 119
Mineral processing operations
model-based control of, 21
Minerals
separation of, by selective magnetic fluidization, 279
Modelling
and control of crystallizers, 3
hydrodynamic, and analysis of two-phase non-Newtonian coal/water slurries, 285
Model(s)
agglomeration, for process design and control, 69
-based control of mineral processing operations, 21
cold, studies on fluidizing characteristics of taconite concentrates, 295
of granular material flow under dynamic conditions, 107
measurements of gas–particle flows and elutriation of 18 inch i.d. cold vortexing fluidized-bed combustion model, 139
phenomenological; control of grinding circuits using, 47
simple, for turbulent gas mixing in CFB reactors, 101
Multicomponent feeds
simulation of locked-cycle grinding of, and its implications for stability and control of industrial comminution circuits, 77

Outokumpu expert system
user's experience of, at Outokumpu plants, 61

Packing fraction
and loading rate; influence of, on visco-elastic behaviour of powder compacts, 231
Particulate composition analysis
on-line; advances in, 93
Particulate process operation, 1
Plastoelasticity
and tabletting of single and multicomponent powders, 195
Powder compacts
influence of loading rate and packing fraction on visco-elastic behaviour of, 231
Process design
agglomeration models for control and, 69
Process tomography
for identification, design and measurement in industrial systems, 85

Rod charges
and mill feed size; effects of, on grinding performance, 119

Saltation velocities
in high pressure conveying of fine coal, 157
Sands
re-examination of minimum fluidization velocity correlations applied to group B sands and coked sands, 147
Separation
of minerals by selective magnetic fluidization, 279
Silica compacts
ordered monodisperse: sintering studies on; effect of consolidation, 185
Simulation
of locked-cycle grinding of multicomponent feeds and its implications for stability and control of industrial comminution circuits, 77
Simulation study
of self-tuning adaptive control for rougher flotation, 33
Single and multicomponent powders
plastoelasticity and tabletting of, 195
Sintering studies
on ordered monodisperse silica compacts: effect of consolidation, 185
Slugging behaviour
of fluidized beds of large particles, 171
Spout-fluid bed
rectangular; flow characteristics in, 205
Submersible probes
effect of non-vertical bubble rise on its measurement using, and its relationship with bubble size: bubble velocity in fluidized beds, 239

Tabletting
and plastoelasticity of single and multicomponent powders, 195
Taconite concentrates
cold model studies on fluidizing characteristics of, 295
Thermal conductivity detector technique
improved, for He measurements in fluidized bed, 249
Turbulent gas mixing
simple model for, in CFB reactors, 101

Vibrating beds
behaviour of, of irregular particles, 163
Visco-elastic behaviour
influence of loading rate and packing fraction on, of powder compacts, 23
